

# SANIHAZE USER GUIDE

Before powering the Sanihaze generator, you need to fill the generator with the sanitising fluid. To do this you need to:

1. Unscrew the cap at the top of the generator.
2. Pour in the fluid, stopping approximately 1cm away from the top.

**ONLY FILL THE MACHINE USING OUR SANIHAZE FLUID.**

## PREPARATION.

1. Attach the mains cable and the remote button to the machine.
2. Check that both the red switch on the rear of the machine and the switch on the remote are in the 0 position.
3. Turn the generator on.
4. Wait 10 minutes for the machine to heat up to the correct temperature. .
5. When the LED on top of the machine turns green the machine is ready to use.

**IF THE REMOTE CONTROL IS STILL CONNECTED, THE MACHINE WILL ENTER STANDBY MODE. REMOVE THE CONTROL TO FIRE THE MACHINE**

## ACTIVATION

1. Switch the red switch on the rear of the machine to the 1 position.
2. Enter the area you need to sanitise and stand near the exit.
3. Point the generator away from yourself and into the area, you want to sanitise.
4. Change the switch on the remote to the 1 position. The machine will run for the pre-configured 30 seconds.
5. The fog is safe to breathe but to avoid any possibility of allergic reactions we recommend you leave the area.

**USE THE REMOTE CONTROL TO ACTIVATE THE MACHINE FROM OUTSIDE THE AREA BEING SANITISED.**

30 seconds will effectively sanitise a 10m<sup>3</sup> area. For larger areas, we recommend activating the machine several times.

Wait 30 minutes for the fog to sanitise the area before ventilating the area.

Please note the fog will trigger both optical and ionisation based smoke detectors. Follow your company's procedures for isolating and re-arming any detectors in the areas being treated.
